

LP Delta Trap – ASSEMBLY & USE

Item List: Large Plastic Trap • 2 Inserts (CAUTION: STICKY) • Wire Hanger

Rubber Septa Lure: Place lure on wire hanger inside trap.

Fiber Lure:

Remove backing from lure and adhere to inside side panel of trap. Take care to insure open ends of fibers do not become blocked with glue on trap.

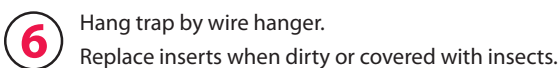

All Other Lures:

Place on sticky surface of trap bottom, taking care not to coat the surface of the lure with the glue from the trap.

NOTE: To prolong storage life, refrigerate or freeze unused lures in their sealed pouch.

Use of tweezers or rubber gloves is recommended for handling septa lures to avoid contaminating septa.

To avoid cross-contamination, only handle traps and lures for one specific insect species at a time. Wash hands and working surfaces thoroughly before assembling and baiting traps for other species.

See opposite side for list of insects monitored by LP Delta Trap.

LP Delta Trap

For use in monitoring:

Apple Clearwing Moth	Honeydew Moth
Armyworm	Lesser Appleworm
Arthur's Sunflower Moth	Lesser Peachtree Borer
Artichoke Plume Moth	Light Brown Apple Moth
Beet Armyworm	Nun Moth
Blackberry Clearwing Borer	Obliquebanded Leafroller
Black Cutworm	Olive Moth/Citrus Flower Moth
