

PredaLure

Beneficial Insect Attractant

PredaLure attracts a wide range of beneficial predatory insects to prey on a number of destructive crop and garden pests, often reducing or eliminating the need for more aggressive treatments.

Long-Life Dispenser Attracts Many Beneficial Insects:

Lacewings (*Chrysopa*)
Lady Beetle (*Coccinella*)
Syrphids (*Flower Fly or Hover Fly*)
Orius (*Pirate Bugs*)
Geocoris (*Big-Eyed Bug*)
Stethorus (*Spider Mite Destroyer*)
Rhagonycha (*Soldier Beetle*)
Typhlodromus (*Predatory Mite*)
Neoseiulus (*Predatory Mite*)
Phytoseiulus (*Predatory Mite*)
**Parasitic Wasps, Wolf Spiders and various
other beneficial & predatory species**

How It Works: VivaTrap! PredaLure dispensers release an attractant which signals beneficial predatory insects that prey is available, provoking them to seek the source of food. The beneficial insects then feed on the unwanted garden pests greatly reducing or eliminating invasive populations.

Includes: 3x PredaLure dispensers & 3x twist ties (3 complete lures)

Instructions: Hang dispensers at crop height, equidistant to each other utilizing one dispenser per 400 square feet of planted area or in 'hot-spots' where pest population is high. For best results deploy PredaLure in early Spring and use through end of season. Dispenser lasts for 60-90 days depending on temperature. Do not cut or puncture dispenser.
