Safe & Effective Solution

Aphid & Whitefly TRAPS

Pesticide free control of aphids, thrips, spider mites, fungus gnats, scale insects, whiteflies and other small flying insects that invade gardens and greenhouse.

Easy Instructions

Use in gardens and greenhouses. Place traps early in the season to prevent infestations from establishing.
Safe for use in food-handling and food storage areas.

- Peel away the release paper from the traps.
- Hang trap using a twist tie or string, or attach to plastic or wooden stakes.
- Place trap where insects have been seen, near infested plants.
- Use one trap per infested group of four plants.
- For heavy infestations use one trap at the base and one trap at the crown of infested plant.
- Do not place trap where small birds can be trapped.
- Replace traps when full or after 3 months. Used traps can be composted or placed in a worm bin.
- In case of skin contact, use vegetable oil to remove glue.

Aphid, Whitefly & Other Small Bug Facts

Aphids, thrips, spider mites, fungus gnats, scale insects, whiteflies and other small flying insects invade gardens and greenhouses throughout the season. These insects damage plants by feeding on their sap or leaves. The first insects landing in gardens start the infestations that damage plants. The Aphid & Whitefly Trap works by imitating a very healthy plant leaf. Insects attracted to the trap are captured and killed in the powerful sticky glue. Use of the Aphid & Whitefly Trap can reduce troubling infestations without the use of pesticides.
