

Clothes Moth Traps

For use in wardrobes, closets, and dressing rooms. For monitoring clothes moths.

Male moths are attracted by species-specific pheromones and stick to the adhesive area. Thus, mating with females will be prevented. Clothes moth traps are insecticide-free and odorless.

Instructions for Use:

1. Open pouch at the narrow side and take out the trap.
2. Fold the trap at the indentation toward the protective paper side and set up.
3. Remove protecting paper.
4. Form a small tent with the tape and stick together.
5. Place trap into wardrobe within easy access of the moths.

The pheromone is incorporated in the adhesive. Store remaining, unused traps in the pouch, close it by folding in the open side and put the pouch back into the folding box.

After removal of protective paper the traps remain effective for at least 3 months. After this time the attractant (pheromone) slowly loses its efficacy and the trap should be exchanged.

Ingredients:

Species-specific attractant (pheromone) and adhesive

Clothes Moth Traps
