Wool pellets

2.

Place around plant

3.

Water

4.

Forms felted mat

(Will not wash out or blow away)

FOR OUTDOOR USE

Once the pellets become wet, they form a felt-like mat that both irritates and absorbs moisture from the foot of the slug or snail. This mat is a natural barrier that is a perfect deterrent to slugs and snails while protecting your plants.

The wool mat is excellent at keeping the surface of the pot dry while also retaining the moisture beneath.

- Weeds have difficulty germinating on the wool mat.
- Reduced evaporation from the pot requires less watering.
- SlugGone will add organic material to your soil as it biodegrades.
- Lasts an entire growing season.

DIRECTIONS

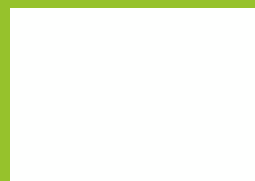

For best results, apply SlugGone in a 4 to 5 inch wide band around the base of the plant approximately $\frac{1}{2}$ " deep. Ensure there are no gaps. Water well.

COVERAGE

6" dia. pots	15
10" dia. pots	6
Landscape	Use in a continuous 4-5" band, area covered will depend on layout
