## Nite Light Flea And Insect Trap

Enclosed are the **Harris Nite Light Flea and Insect Trap** and one glue board. The glue board can be replaced with a new refill as needed.

**How it works:** Fleas and many crawling and flying insects are attracted to light and warmth. The light sensor of the trap turns the bulb on automatically when the room is dark. Insects drawn to the light are trapped on the sticky glue board.

### DIRECTIONS FOR USE:

Prepare the glue board. The unprinted side is the glue side, protected by a peel off backing.

**1** Before peeling off backing to reveal the glue, fold the tabs along the dotted lines, folding away from you.

The tabs should now be at a 90 degree angle to the card.

**2** Flip the card over and peel away the protective backing, starting at the bottom edge.

**3** Holding the card carefully by its edges, insert the folded tabs into the slots near the top of the trap.

Press the card in, to make contact with the trap.

**4** Rotate the plug so it faces outwards.

Plug the trap into the bottom input of a wall outlet.

Best results are achieved in a fully dark room, placing traps in each room where you find insects. Replace the refill each month or when insects accumulate.

**CAUTION:** In case of contact with glue board adhesive, use vegetable or mineral oil to remove adhesive.

**One product will not eliminate a flea infestation. Use a pet flea shampoo, pet flea spray or flea drops and a flea spray for the home that kills flea eggs.**

**WARNING:** Risk of electrical shock. This is not a toy and is not intended for use by children. For adult use only. Do not use with extension cords. For indoor use only. Plug only into exposed wall outlets where unit is ventilated and cannot contact bed coverings or other material that might present a fire hazard.
