

# EASY DIRECTIONS

1. Remove cable tie. Add 1 measured cup of water to the trap with 1 bait packet. Adding excess water reduces function. Bait packet wrapper will dissolve in water.
2. Pull up on top of lid to activate trap. Tighten lid. The enclosed cable tie can be looped through the hole in the lid to secure the trap to larger tree branches or fence posts.
3. When hanging or standing the trap, place it in a location that will pull flies away from the area you wish to protect. Traps will attract from 30-40 feet so multiple traps may be needed to draw flies away from target space. Place away from living space to avoid odor.
4. Cable tie can be easily removed or adjusted by pressing down on the clip to release the end.
