**Cactus & Succulent** is a blended fertilizer specially designed to support the keystone plants commonly found in arid climate gardens and water-wise xeriscapes. This robust blend of natural and organic ingredients will supply succulents of all types, including cactuses and agaves, with the nutritional backbone to keep them growing strong and producing beautiful blooms. At the same time, improving soil conditions and encouraging extensive root systems can help maintain fabulous conservation focused gardens filled with striking cactuses and succulents.

### GUARANTEED ANALYSIS

TOTAL NITROGEN (N)	2.0%	Derived from: Bone Meal, Basalt, Potassium Sulfate, Langbeinite, Alfalfa Meal, Feather Meal, Soy Protein Hydrolysate, Kelp Meal
0.2% Water Soluble Nitrogen		
1.8% Water Insoluble Nitrogen		
AVAILABLE PHOSPHATE (P <sub>2</sub> O <sub>5</sub> )	4.0%	ALSO CONTAINS NON-PLANT FOOD INGREDIENT(S):
SOLUBLE POTASH (K <sub>2</sub> O)	8.0%	2.5% Humic Acids derived from Leonardite
CALCIUM (Ca)	5.0%	*Humic Acids may increase micronutrient uptake by plants
MAGNESIUM (Mg)	1.0%	Listed by the Organic Materials Review Institute (OMRI) for use in organic production.
1.0% Water Soluble Magnesium		
SULFUR (S)	3.0%	F002174
IRON (Fe)	1.0%	

### APPLICATION RATES

Approximate Conversions: 1 1/2 cups = 1 lb    1/2 cup = 4.6 oz    1 Tbsp = 0.6 oz

Fertilize cactuses after winter dormancy has ended, early in the active growing period. Fertilize every 4-6 weeks after the first application throughout the growing period, but do not apply fertilizer during the dormant period.

Other succulents should be fertilized during their active growing period; this can occur at any time of year depending on the species. Fertilize every 4 weeks during the growing period.

#### Containers:

For new plantings, add 1/2-1 Tbsp per gallon of soil and mix thoroughly before planting.

For established plants, add 1 tsp fertilizer per quart of water and thoroughly drench soil. Repeat application every 4 weeks throughout the active growing period.

#### Landscape:

For new transplants, apply to the planting hole 1 Tbsp of fertilizer per gallon of soil in the original container. Mix and water well.

For established specimens, apply 1/2 cup per 3 inches of diameter and scratch gently into soil. Water well.

USE OF A DUST MASK IS RECOMMENDED
