

terraFlux

ACTIVATED BIOCHAR

Used to enhance soil quality, increase water retention, improve plant vigor and support soil structure.

Filled with microbial life and pH adjusted for immediate application.

everflux
TECHNOLOGIES

TerraFlux takes its name from the most fertile soil on Earth: Terra Preta, a biochar-based soil found in the Amazon

Made of biochar inoculated with BioFlux fermented plant boost, Terra Flux helps to:

- Give shelter to soil microbial life
- Maintain a reservoir for water and nutrients
- Boost plants' ability to take up nutrients
- Buffer the effects of toxic elements.
- Neutralize the high alkalinity found in most raw biochars.
- Provide permanent organic matter to soil

"If you're into clean cannabis then you need to check out the great things Everflux is creating. The aroma and flavor profile is insane!"

-Angel, Kings of Cannabiz
Pueblo, CO

TERRAFLUX INGREDIENTS

Low Ash Biochar
Lactic Acid Bacteria
Worm Castings
Insect Frass
Kelp Meal
Oyster Shell
Crab Meal
Composted Chicken Manure

APPLICATION INSTRUCTIONS

Apply at or before planting. For best results, mix TerraFlux into soil at approximately 5-10% of soil volume. For field application, apply at the root zone.

In his 29th year of farming in Valley Ford, CA, Michael Collins used no inputs except BioFlux and TerraFlux (biochar activated with BioFlux) to grow over 200 varieties of fruits, vegetables, grains, and grasses. You can see his amazing results above.

**We make it easy to grow
organic, high terpene
flower, without chemicals**
