

RICE HULLS

A natural, sustainable, and renewable alternative to peat, vermiculite, and perlite. Rice Hulls make an impressive growing media when mixed with compost, your favorite potting soil, or added into a seed starting mixture. They provide optimum water-holding capacity, increased soil stability, and reduce the potential for drought stress.

Recommended Use: 2:1 ratio for seed starting. 1:2 ratio as a soil amendment.

☐ 1/4 Cu. Ft. ☐ 1/2 Cu. Ft. ☐ 1 Cu. Ft.
