

The key to the **The Bug Blaster's** superior performance to any other spraying tool is it's ability to work at the surface and into the center of your plants at any height hitting the underside of the leaves.

To reach over-head areas simply rotate & lift from the ground up

WARNING: KEEP AWAY FROM ALL ELECTRICAL. DO NOT USE WITH CHEMICALS

* see inside this label for more helpful information

Instructions

Requirements to properly adapt **The Bug Blaster** nozzle: 3/4" male standard hose thread at end of watering wand with 45 degree bend and shut-off valve. (Place sticker on wand for future reference)

Simply screw **The Bug Blaster** nozzle onto watering wand and connect to your garden hose, turn on the water and you are ready to go. For best results keep the spray vertical and with a sweeping motion, work the nozzle in and out of the shrub, concentrating the spray on the infected area of the plants. Control the water flow with the valve at the base of the handle. Restrict the flow for delicate plants and just blast away on hardy plants and heavy infestations. **The Bug Blaster** also works great for cleaning plants of dust, dirt, spider webs and old or unhealthy leaves.

- 1) Spray infested plants every 3 to 5 days for 2 to 3 weeks.
- 2) Spray up wind or wear a raincoat for over-spray.
- 3) Spray plants that are susceptible to powdery mildew, black spot, or rust in the morning to give the plants a chance to dry out during the day.

THANK YOU

...for purchasing **The Bug Blaster**. We also thank you for doing your part in protecting the environment.

BUG BLASTER NOZZLE

The Bug BlasterTM

100% Environmentally Safe Insect Control

HOW THE BUG BLASTER WORKS

Water is sprayed with full pressure from your garden hose. The Patent Pending method and nozzle creates a 360 degree wall of water which blasts the pests from undersides and tops of leaves also cleaning sooty mold and dirt which interferes with photosynthesis.

WHAT HAPPENS TO THE PESTS?

The Bug Blaster fatally traumatizes up to 70% of the adults and up to 100% of infant or larva stages. It also dislodges most eggs. (This will vary depending on type of leaf surface and pest species.) After just one application you devastate the insects life cycle eliminating colony take-over. With a few more applications, plants regain complete health.

WORKS GREAT ON:

WHITEFLIES • APHIDS • MEALY BUGS • SPIDER MITES
AND ALSO MAKES A GREAT PLANT CLEANER!
