

SHAKE WELL

MIXING DIRECTIONS: Thoroughly mix 1 part of Garlic Barrier to 9 parts of water. (Example: 14 oz of Garlic Barrier into 128 oz/1 gallon of water).

Product also works well when mixed with soybean, canola, or cottonseed oil. (Example: 1 oz of Garlic Barrier, 1/2 oz of soybean oil, and 16 oz of water).

Note: If oil and water are not mixing well in above formula, the addition of a tablespoon of liquid soap mixed in will break down the oil and allow mixing.

TIMING: Spray plants when they first emerge from ground and every 12-14 days thereafter during season. For best results, spray when the foliage is dry. If foliage is wet, wait to apply.

Spray fruit trees before bloom, but not during bloom as product may repel bees. Resume spraying every two weeks after bloom. Do not spray in heat of day.

TASTE TRANSFER: Garlic Barrier will impart no taste to fruits or berries or other edibles.

METHOD OF APPLICATION: Mix approximately 14 ounces of Garlic Barrier to 128 ounces/1gallon of water.

Hand sprayer or Canister sprayer — use a fine spray and cover plants thoroughly.

STORAGE: Store in original container in cool place away from children and pets.

DISPOSAL: Rinse thoroughly and offer for recycling.
