ON-Gard is an innovative fertilizer based on soy protein hydrolysates. Protein hydrolysate is the organic material obtained by the hydrolysis of proteins to their constituent amino acids and short polypeptides. They are a source of nitrogen. It is rapidly absorbed by leaves and roots and translocated throughout the plant. ON-Gard is 100% water soluble and manufactured for consistency.

GENERAL INFORMATION

ON-Gard improves plant growth, supporting all phases of development

ON-Gard enhances traditional fertilizer programs to achieve high productivity. ON-Gard is non-phytotoxic and does not contain environmentally sensitive compounds. ON-Gard does not contain any animal products, animal extracts, or tannery byproducts.

USE INFORMATION AND RATES

ON-Gard is suitable for use on all growing plants. Plants respond well to ON-Gard application at key nutrient demand periods such as seed germination, bloom, fruit development, sugar assimilation, etc. ON-Gard can be applied as either a foliar spray or soil drench using any type of sprayer (hand, hydraulic, air blast, etc.) or irrigation method (overhead, overhead boom, and drip).

Field grown plants: Apply 16 – 64 fluid ounces per acre during the growth cycle of the plant. Use as much water as is needed for adequate foliage coverage or as required by any tank mix partner material(s). Applications may be repeated up to 6 times per growing season. ON-Gard can be applied as a pre-plant root dip or as a seed drench using a 1% v/v rate.
