

BotanoHealth

BH – B technical information sheet

Product Description

BH- B is a formulation of Thyme oil and specially formulated ingredients that substantially enhance its activity, making it efficient against fungus such as Botrytis at concentrations 10 – 20 times lower than other Thyme products.

All the ingredients of BH – B are EPA exempt approved materials.

The product is safe for use throughout the growing cycle.

Dosage and Application

BH – B is applied by mixing in water and using adequate spraying equipment to wet the entire plant surface, including both the upper and lower side of leaves.

Dosage: 0.5 % - 2% in water, with water spraying volumes of around 500 l/Ha

Application frequency:

Preventative: every 2 weeks in periods when crop is prone to fungus damage

Curative: 1 per week until fungus is eliminated

For treatment of spider mites: 2 applications during first week, 1 time per week for following weeks.

Especially efficient against spider mites when using at dosage of 2% + 1% NeemGard.
