

bioFlux

FERMENTED PLANT BOOST

You won't find an N-P-K number on this brew, but yet it's proven to produce the same yields and more nutrient dense, flavorful plants.

BioFlux feeds the soil, not the plant, fertilizing with microbes, in any medium.

 **everFlux**
TECHNOLOGIES

Use BioFlux to increase nutrient uptake, and growth. Apply to any fruit, vegetable, grain, grass or flower as a universal non-chemical fertilizer.

BioFlux fermented plant boost super charges plant growth and helps to:

- Enzymatically unlock your soil's nutrition via microbes
- Improve your plant's unique phenotypic expression
- Accelerate and improve root development
- Reduce or eliminate inputs like fertilizer and pesticide
- Reduce water use
- Improve soil quality year after year

"If you're into clean cannabis then you need to check out the great things Everflux is creating. The aroma and flavor profile is insane!"

-Angel, Kings of Cannabiz
Pueblo, CO

BIOFLUX INGREDIENTS

Worm Castings
Insect Frass
Kelp Meal
Oyster Shell
Crab Meal
Lactic Acid Bacteria
Composted Chicken Manure

APPLICATION INSTRUCTIONS

Mix 30-60 mL per gallon of water for soil or foliar application; apply once a week from 3 weeks into veg until harvest. No need to flush. Compatible with other nutrients. Do not mix with pesticides, herbicides or unfiltered city water.

In his 29th year of farming in Valley Ford, CA, Michael Collins used no inputs except BioFlux and TerraFlux (biochar activated with BioFlux) to grow over 200 varieties of fruits, vegetables, grains, and grasses. You can see his amazing results above.

We make it easy to grow organic, high terpene flower, without chemicals
