Lady Bug Attractant

Lady Bug Facts

You can use lady bug lures during the growing season to attract beneficial insects to your garden.

The Lady Bug Attractant contains pheromones that act as a natural magnet, signaling to beneficial insects that there are bugs to eat such as aphids, plant lice, scale insects and other pests. Beneficial insects drawn by the Lady Bug Attractant lure will seek out and kill pests, then move on to find more food. Look for dead, dried up aphids and check for reduced aphid numbers and damage. Effects may not be seen for as long as three weeks. Lady bugs and other beneficial insects may be difficult to identify or find because they hide from predators.

Easy to Install:

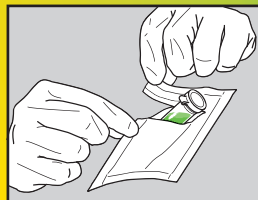

NOTE: Do not touch the lure. Use gloves.

- 1 Open the pouch and remove the lure and twist tie.
- 2 Open the lure cap.
- 3 Attach the twist tie as shown.
- 4 Hang lure on any plant in your greenhouse or garden where aphids and other insects are present. Lures will cover up to 6 feet in diameter.

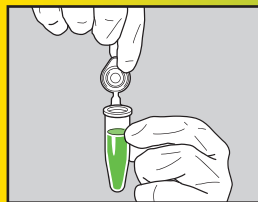

Replace lures every 2 to 3 weeks.

DO NOT USE TOXIC PESTICIDES WITH LADY BUG ATTRACTANT LURES

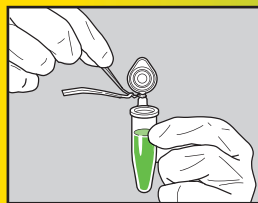

Keep out of reach of children and pets.

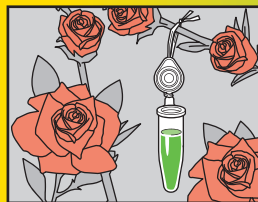

Open white pouch

Open lure cap

Attach twist-tie hanger

Hang lure on plant
