

SMARTER GROWING WITH HYDROSPIRAL

Install this amazing mesh tube into the ground near your plants and see plants take off! Great for penetrating compacted soil and improving clay soils.

HydroSpiral Tubes are made of heavy duty PE plastic with an anti-clogging design. High density mesh walls prevent soil from entering the tube, without the need for a sock filter.

Spiral design spreads water outward 2 to 7 feet around each tube depending on your soil type and run time. Compatible with any drip irrigation system. Use less emitter lines, as one tube can water a group of plants.

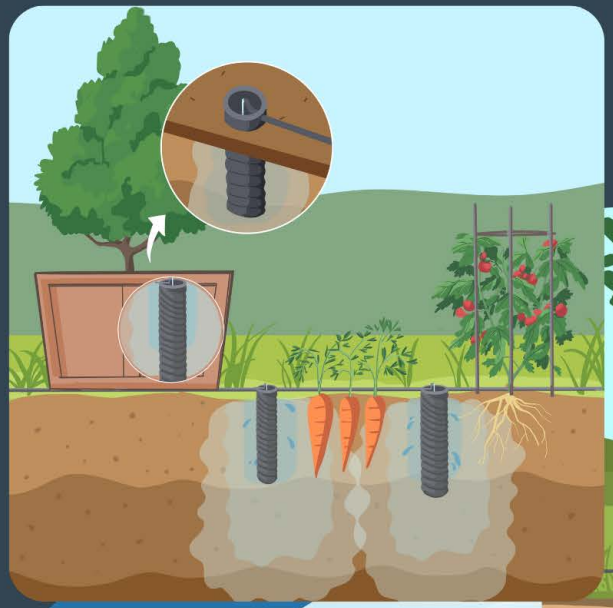

Using the included low flow and slow drip emitter you can maximize water, nutrients and air to the root zone.

RESEARCH RESULTS

Trees watered with the deep root irrigation systems demonstrated the ability to quickly thrive after transplanting thanks to improved root growth and root mass.

Deep root watering enhances each tree's chance of survival, helping it grow new roots more quickly and minimizing the need to buy and plant costly replacement trees.

48% Deeper Root Growth after 3 months
18% Greater Root Mass after 18 months
11% More above ground growth

OXYGEN, WATER + NUTRIENTS STRAIGHT TO THE ROOT ZONE.

WATER SPIRALS OUTWARD AND DOWNWARD AT A SLOW SPEED, ALLOWING SOIL TO ABSORB MOISTURE, THEN BACK UP TOWARD THE SURFACE TO FULLY SATURATE ROOT ZONE.

REVITALIZE

Hydrospiral improves aeration and boosts microbial activity in your soil. VermisTerra products introduce beneficial microbes that hold water and nutrients in place. An army of good guys:

- Enhance nutrient absorption
- Balancing pH levels
- Release locked plant nutrients
- Break down harmful salts
- Protect from disease and pests
- Loosen compacted soil over time

Helping your plants thrive and grow vigorously. For the best results, use HydroSpiral and VermisTerra Tea together.
