

Tiny Wasp Surprise™ are 100% natural fly parasites which are raised under optimal conditions to provide the highest quality and most nutrition possible. They are then rushed to you to insure the freshest quality. Many finicky reptiles, amphibians and tropical fish readily consume Tiny Wasp Surprise™ preferentially over formulated diets.

DIRECTIONS: Feed Tiny Wasp Surprise™ on a daily basis at regular time intervals. Tiny Wasp Surprise™ will start emerging soon after you receive them. Most animals are quite entertained by chasing down the live insects or eating them off the surface of water. Place in refrigerator if you wish to slow their development.
