

The team at Creedmoor Sports wants to make sure our customers get the best possible fit in a shooting coat. The first step in ensuring a great fit is getting accurate measurements of your body. This guide utilizes our 40+ years of coat-making experience to help you get the correct measurements and ultimately get a great-fitting shooting coat.

Measuring Tips:

- For an accurate measurement, you will need to use a cloth/flexible plastic tape, commonly referred to as a tailor's tape. Metal tape measures are not flexible enough to accurately take measurements for your coat; please do not use them.
- Wear the same clothing you plan to wear under your shooting coat while measuring.
- Have someone help you take these measurements so that you don't contort your body trying to take them yourself.
- Record your measurements as you go through each step of the measuring process. A form is included at the end of this document.
- Never hesitate to call or email us with questions regarding measurements, coat options, or special needs for your coat.

Measuring Instructions

Chest:

Measure around the largest part of your chest under the arms. This is typically at the nipple level. Record the measurement where the tape begins to overlap. We recommend repeating the chest measuring process twice to ensure your measurements are consistent.

Waist/Stomach:

Measure around the largest portion of your body at the waist or stomach level. It is important to measure at the largest area to ensure the coat fits correctly. Do not use your pants size as your waist measurement as it will not provide an accurate measurement for making your coat. We recommend repeating the waist/stomach measuring process twice to ensure your measurements are consistent.

NOTE: For the following measurements, it is recommended that you assume your normal offhand position (a rifle is not required, just take the same shooting position you normally would for offhand. See images to follow).

Center Back to Elbow:

Measure from the top center of your back between your shoulder blades, across to the point of your shoulder. Then from the point of your shoulder measure down to the point of your elbow. Record the total distance measured from center back to the point of the elbow.

Elbow to Cuff:

Measure from the point of your elbow to your wrist bone.

Coat Measurement Record Sheet

Record your measurements below for submission at the time of your order. We will take them over the phone, or you may email them to us at the time of order to: custserv@creedmoorsports.com.

We also recommend retaining a copy of these measurements for your records.

Chest: _____ Inches

Waist/Stomach: _____ Inches

Center Back to Elbow: _____ Inches

Elbow to Cuff: _____ Inches
