

# Bottle Tree Assembly Instructions

You will need a spade or shovel to dig a hole.  
And some rocks or coarse gravel to pack around the plastic sleeve, when it is in the ground.

Please check to see you have all these component pieces.

## Parts:

- A. 1 x Plastic Sleeve 18" long.
- B. 1 x Straight tube 20" without 'twigs' with female thread on one end and solid on the other end.
- C. 1 x Straight tube 16" without 'twigs' with threaded bolts on each end.
- D. 1 x 30" tube with 'twigs' partly curved and Male 'dimpled' Prong.
- E. 1 x 24" curved branch with twigs and female 'dimpled' Socket.

## Assembly:

- Parts B, C and D thread together, with part B at the bottom.

Note: Part C can thread to part B and D with either of its two male threaded ends.

- Part E slips onto part D with 'dimpled' sections aligned.

Lay the Bottle Tree down on the ground.

- Dig a hole that is about 18" deep x about 8" across.
- Position the Plastic Sleeve in the hole and pack rocks or gravel loosely around it, mixed with the soil you've excavated.
- Insert the assembled Bottle Tree into the Sleeve and check it is upright.
  
- Tread around the base firmly, so the ground is tight around the sleeve
- Arrange your own collection of Bottles to taste!
- Note that you can rotate the Bottle Tree within the Sleeve, to get the best viewing angle.
