

Bottle Tree Assembly Instructions

You will need a spade or shovel to dig a hole and some rocks or coarse gravel to pack around the plastic sleeve, when it is in the ground.

Please check to see if you have all these component pieces.

1. 1 x Plastic Sleeve 18" long.
2. 1 x Straight tube 24" without 'twigs'.
3. 1 x 28" tube with twigs partly curved.
4. 1 x 20" straight tube with a SOCKET and twigs.
5. 1 x 24" curved branch with twigs.

Note that all the joints of the Bottle Tree tubes have 'dimples'. Therefore, there is only one way they can fit into each other, to make the shape shown in the picture.

Assembly:

- Fit together parts # 2, 3, 4 and 5 in that order and lay the Bottle Tree down on the ground.
- Dig a hole that is about 18" deep x about 8" across.
- Position the Plastic Sleeve in the hole and pack rocks or gravel loosely around it, mixed with the soil you have excavated.
- Insert the assembled Bottle Tree into the Sleeve and check it is upright.
- Tread around the base firmly, so the ground is tight around the sleeve
- Arrange your own collection of Bottles to taste!
- Note that you can rotate the Bottle Tree within the Sleeve, to get the best viewing angle.
