DESCRIPTION

A barometer is not only a beautiful decoration, it can also predict the weather by detecting changes in air pressure. This Barometer is made of glass, and the liquid inside is water mixed with a soluble pigment. You can choose different colors as you like. Just put one at home, and you won't need to watch the weather station all day; the barometer will tell you what to expect.

Picture 3

INSTRUCTION

- ① Mix one packet of dye in a glass of water.
- ② Connect the syringe tubing to the syringe. Fill syringe with the colored liquid from step one, inject into the glass barometer about 3 times as shown in Picture 2.
- ③ When it is going to rain or snow, the water level in the side tube will rise to be much higher than the water surface in the main bottle. On a sunny day, it will come back to be the same level, or even lower.

SPECIFICATION

Material: Glass

Size: 9cm Diameter, 15cm Height.

Colors: Optional.
