

Anti-glare Visor

It is important to protect your eyes from harmful elements in sunlight including Ultra Violet radiation and blue light, especially when you're driving.

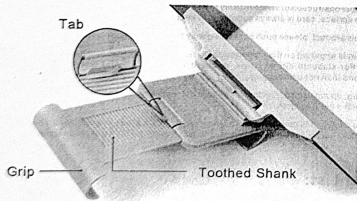

Even though infra-red and ultraviolet are not visible to the human eye, they are still absorbed by the eye and the eye-lid.

Anti-glare visor can filter harmful elements and soften the light source, it certainly can improve your visual comfort.

Anti-glare glass with almost no reflectance, is an innovative product of Hisgadget Inc.

It will reduce substantially the glare effect of headlights, taillights and luminaires on nighttime vision, thus enhancing driving performance and lowering crash risks. Also, it works like a charm in mitigating the blinding effect of strong sunlight, diminishing distractions to driving.

How To Use The Visor

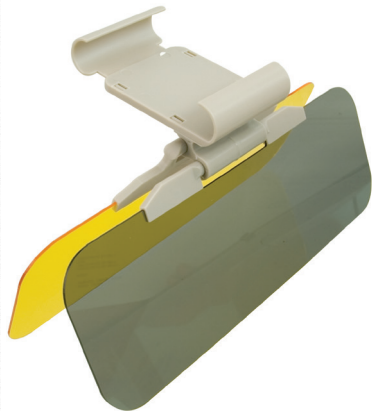

With the end of the tab pulled up a little bit, hold the grip and then draw out the toothed shank gently.

- The yellow side is designed for night-time use.
- The gray side is designed for day time use.
- The retractable toothed shank should be always on the top side.
- Please remove the protection film before usage.
- When you hook the anti-glare visor with your original visor, the Toothed Shank side should be facing yourself.
- The anti-glare visor is supposed to hook with your original visor.
- Use 2 hands to adjust the angle of the panels.

The demonstration of day time use:

Flip the yellow panel to the top; the gray panel to the bottom.

The two panels should form an angle of about 110 degrees.

The demonstration of night-time use:

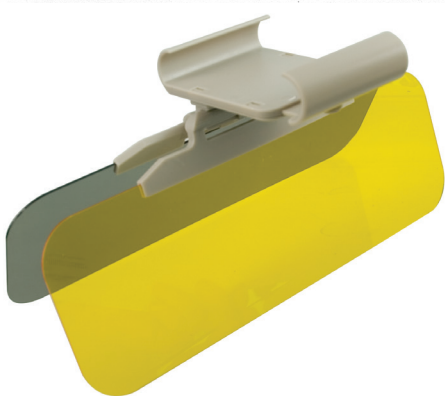

Start with the shape of day time use.

Push the gray panel upwards until it touches the immobile grip.

Then,

Flip the yellow panel down.

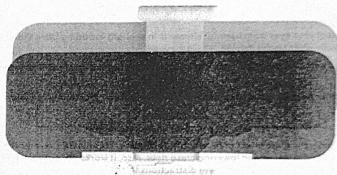

You can adjust the position of your original visor for a better view.

When you don't use the anti-glare visor:

You can just fold the two panels.

You do NOT have to take it off from your original visor.

Warnings and Precautions:

1. As substantial obstruction of vision is likely to be caused by dirt/dust, film formation or moisture accumulation on the screen surface, care is always suggested to keep the screen surface clean and clear.
2. To install this product, please push outwards gently the outer rims of the screens with pressure applied evenly.
3. If dust or dirt is apparent on the screen surface, simply use a soft hairbrush or chamois leather to remove the dust or dirt. For stubborn dirt or stains, please detach the screen(s) first by loosening the screws with a screwdriver and then rinse thoroughly.
4. For cleaning, do not use coarse cloth or volatile solvents such as alcohol or paint thinners, with soapy water. Finally, dry with a lint-free cloth.
5. Please avoid using this product while driving in unlit or dark areas in which night vision devices should be a lot more helpful. This product is never intended to be a substitute for night vision systems.
